

RESOLUTION BY ICCAT ON CIRCLE HOOKS

RECOGNIZING that ICCAT Parties should already be reporting data on incidentally caught sea turtles to the SCRS;

IN SUPPORT OF the 2004 Food and Agricultural Organization (FAO) Technical Consultation on Sea Turtles Conservation and Fisheries and the Guidelines to Reduce Sea Turtle Mortality in Fishing Operations, which were adopted by the Committee on Fisheries (COFI) in March 2005;

RECALLING that the 2003 Resolution by ICCAT on Sea Turtles [Res. 03-11] encourages “technical measures to reduce the incidental catch of turtles” and resolves to “support efforts by FAO to address the conservation and management of sea turtles, through a holistic approach”;

NOTING that recent international scientific studies on circle hooks show a statistically significant decrease in sea turtle by-catch when such hooks are used in pelagic longline fishing, but that studies and trials continue in different geographic areas;

FURTHER NOTING that scientific studies indicate that, with the use of circle hooks, the hooking location can lead to a decrease in post-release mortality of incidentally caught species;

CONSIDERING that the United Nations Agreement on Straddling Fish Stocks and Highly Migratory Fish Stocks calls on nations to take ecosystem considerations into account and that many countries, including Contracting Parties, are moving to incorporate ecosystem considerations into fisheries management; and

ALSO RECALLING that both blue marlin and white marlin are currently under a rebuilding plan and the use of circle hooks has been experimentally shown to significantly reduce their post-release mortality;

THE INTERNATIONAL COMMISSION FOR THE CONSERVATION
OF ATLANTIC TUNAS RESOLVES THAT:

1. All Contracting Parties, Cooperating non-Contracting Parties, Entities, and Fishing Entities (CPCs) are encouraged to undertake research trials of appropriate-size circle hooks in commercial pelagic longline fisheries.
2. CPCs should also encourage research and trials on the use of circle hooks in recreational and artisanal fisheries.
3. CPCs are encouraged to exchange ideas regarding fishing methods and technological gear changes that improve the safe handling and release of incidentally caught species including, but not limited to, the use of de-hookers, line cutters, and scoop nets.
4. When feasible and appropriate, SCRS should present the Commission with an assessment of the impact of circle hooks on the dead discard levels in ICCAT pelagic longline fisheries.
